

**Fast, Secure and Not Annoying Smart
Wallet Protocol on Solana**

By the very serious Kronus Team

Kronus is an Annoying-Free Smart Wallet Protocol for Solana

~ 李乐 Le, Senior Software Architect, Kronus

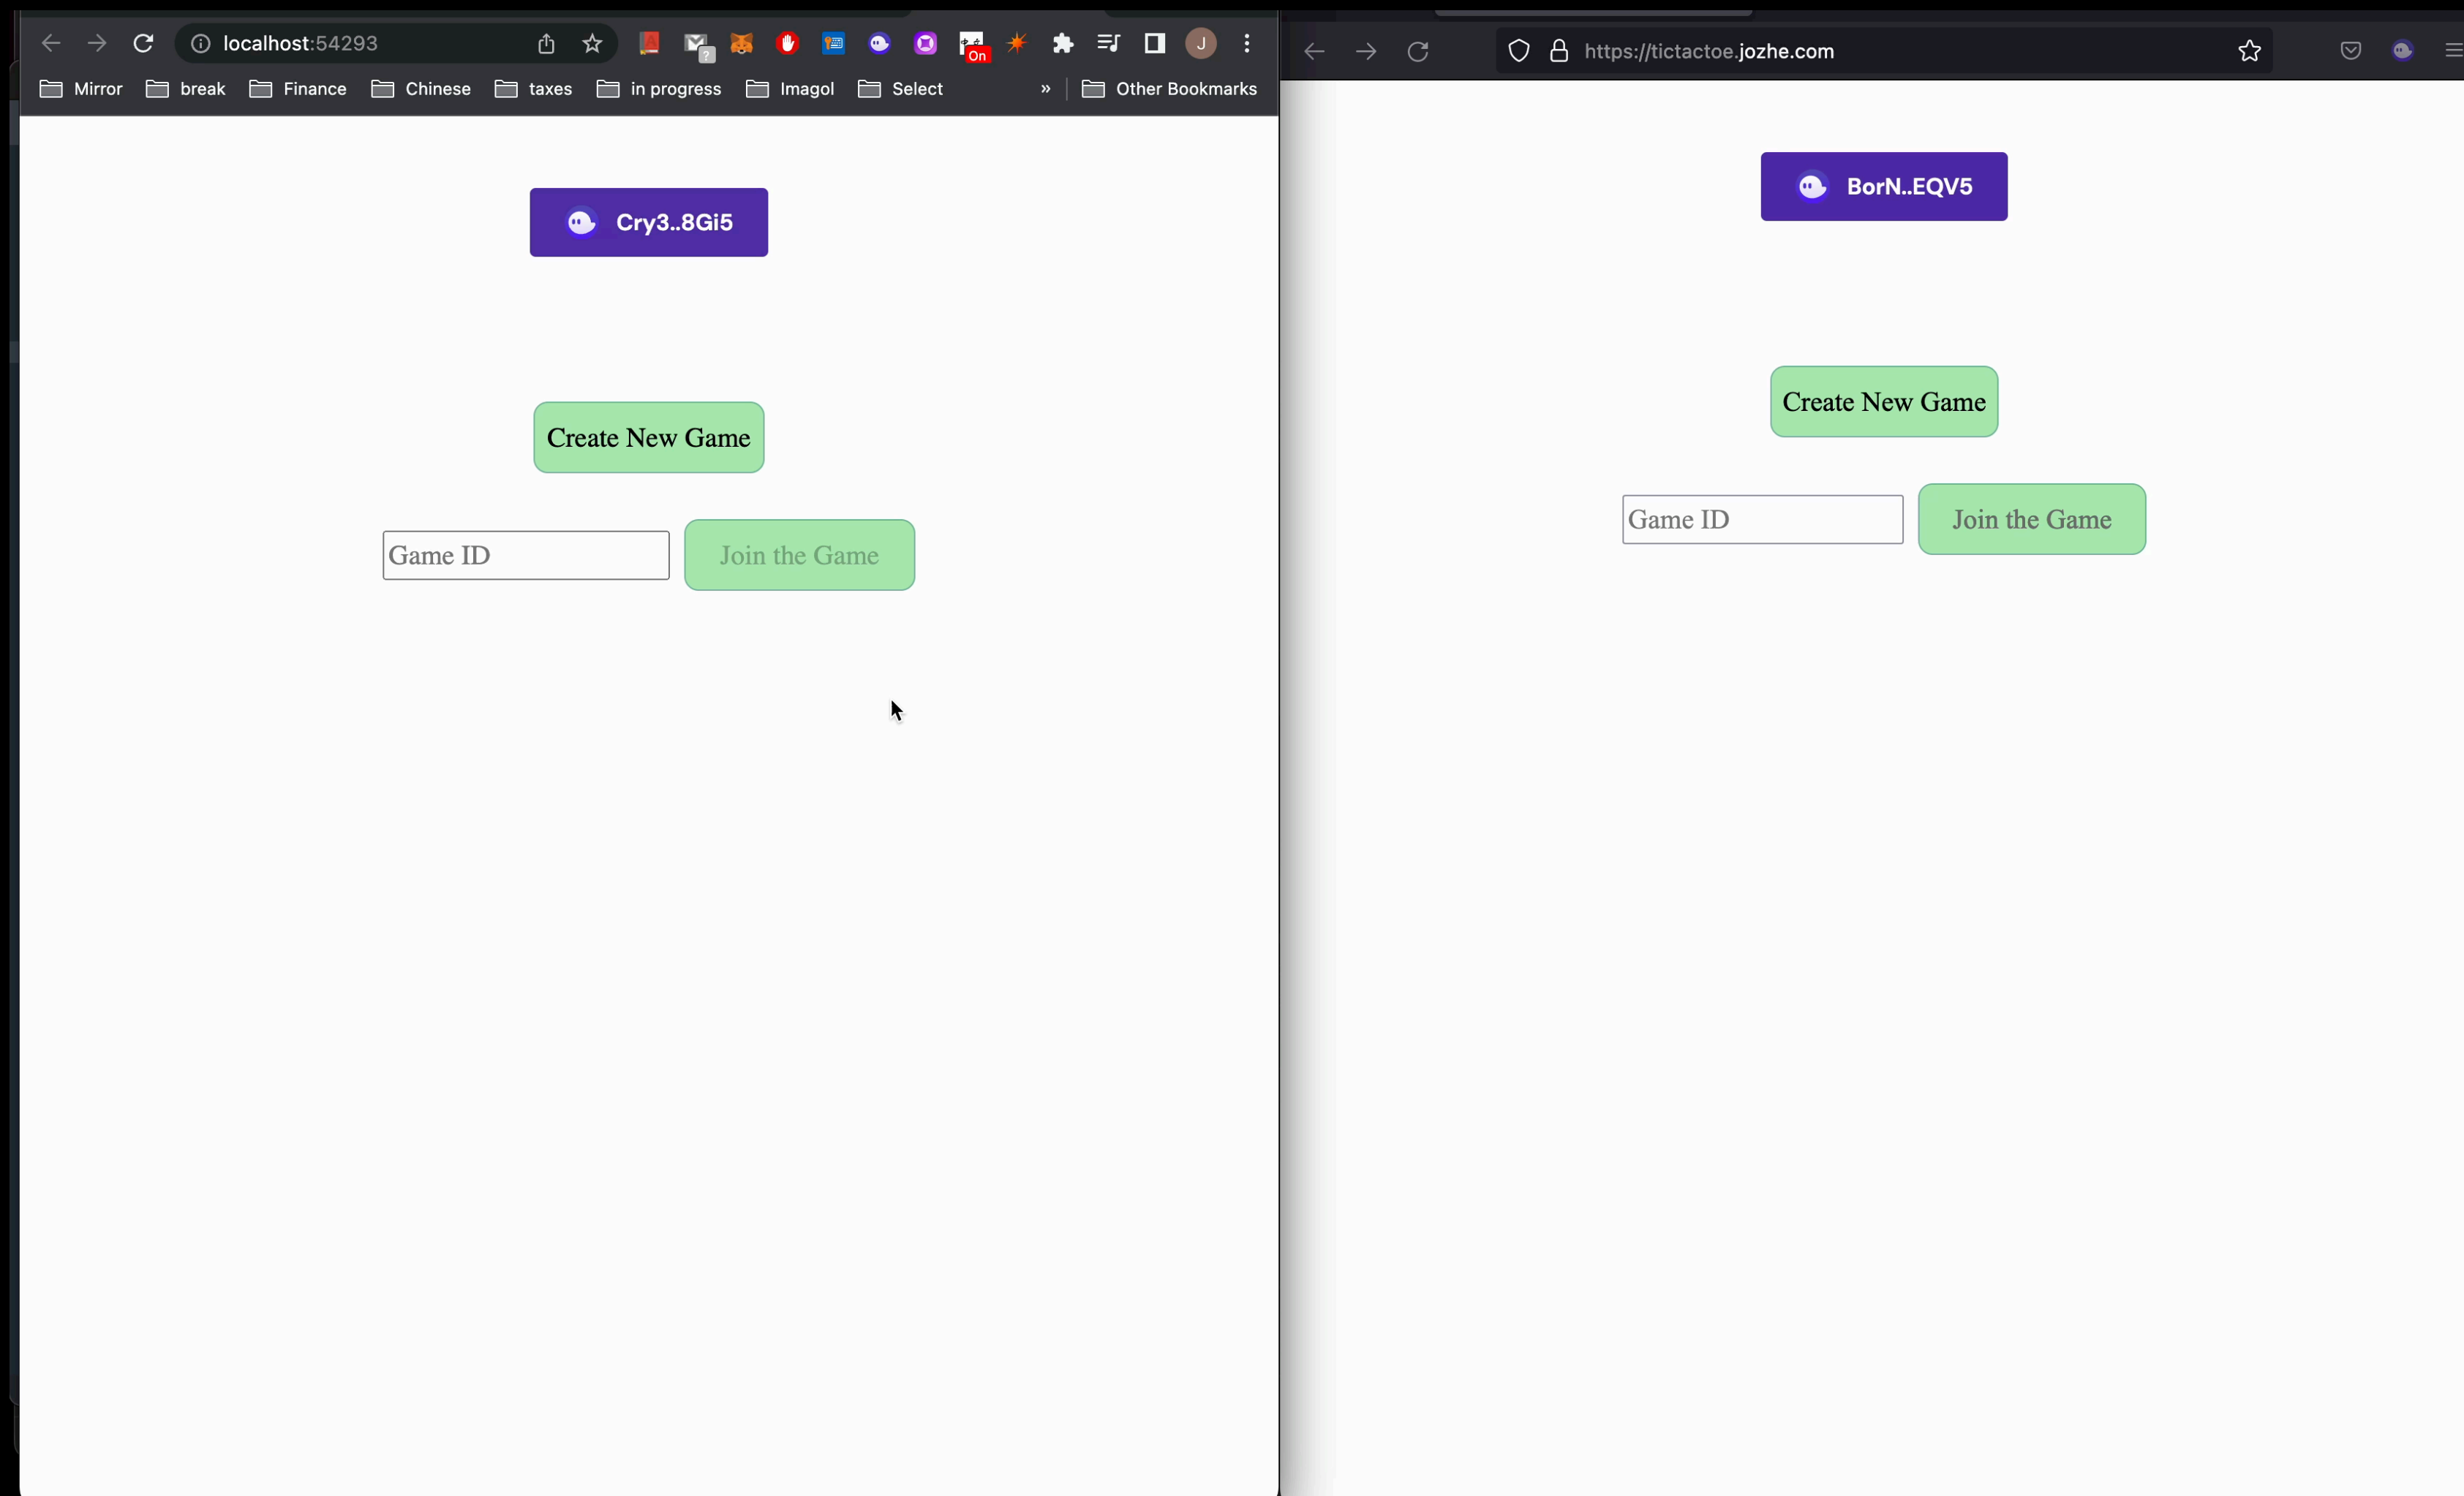

**No more repeatedly clicking
annoying wallet popups**

How the **Kronos Protocol** works

Demo : Tic-Tac-Toe Game UI

No Kronus

On the left-hand-side, the player suffers through clicking the annoying popup for every action on the chain.

With Kronus

On the right-hand-side, the player delightfully plays through the tic-tac-toe game. No popups :D

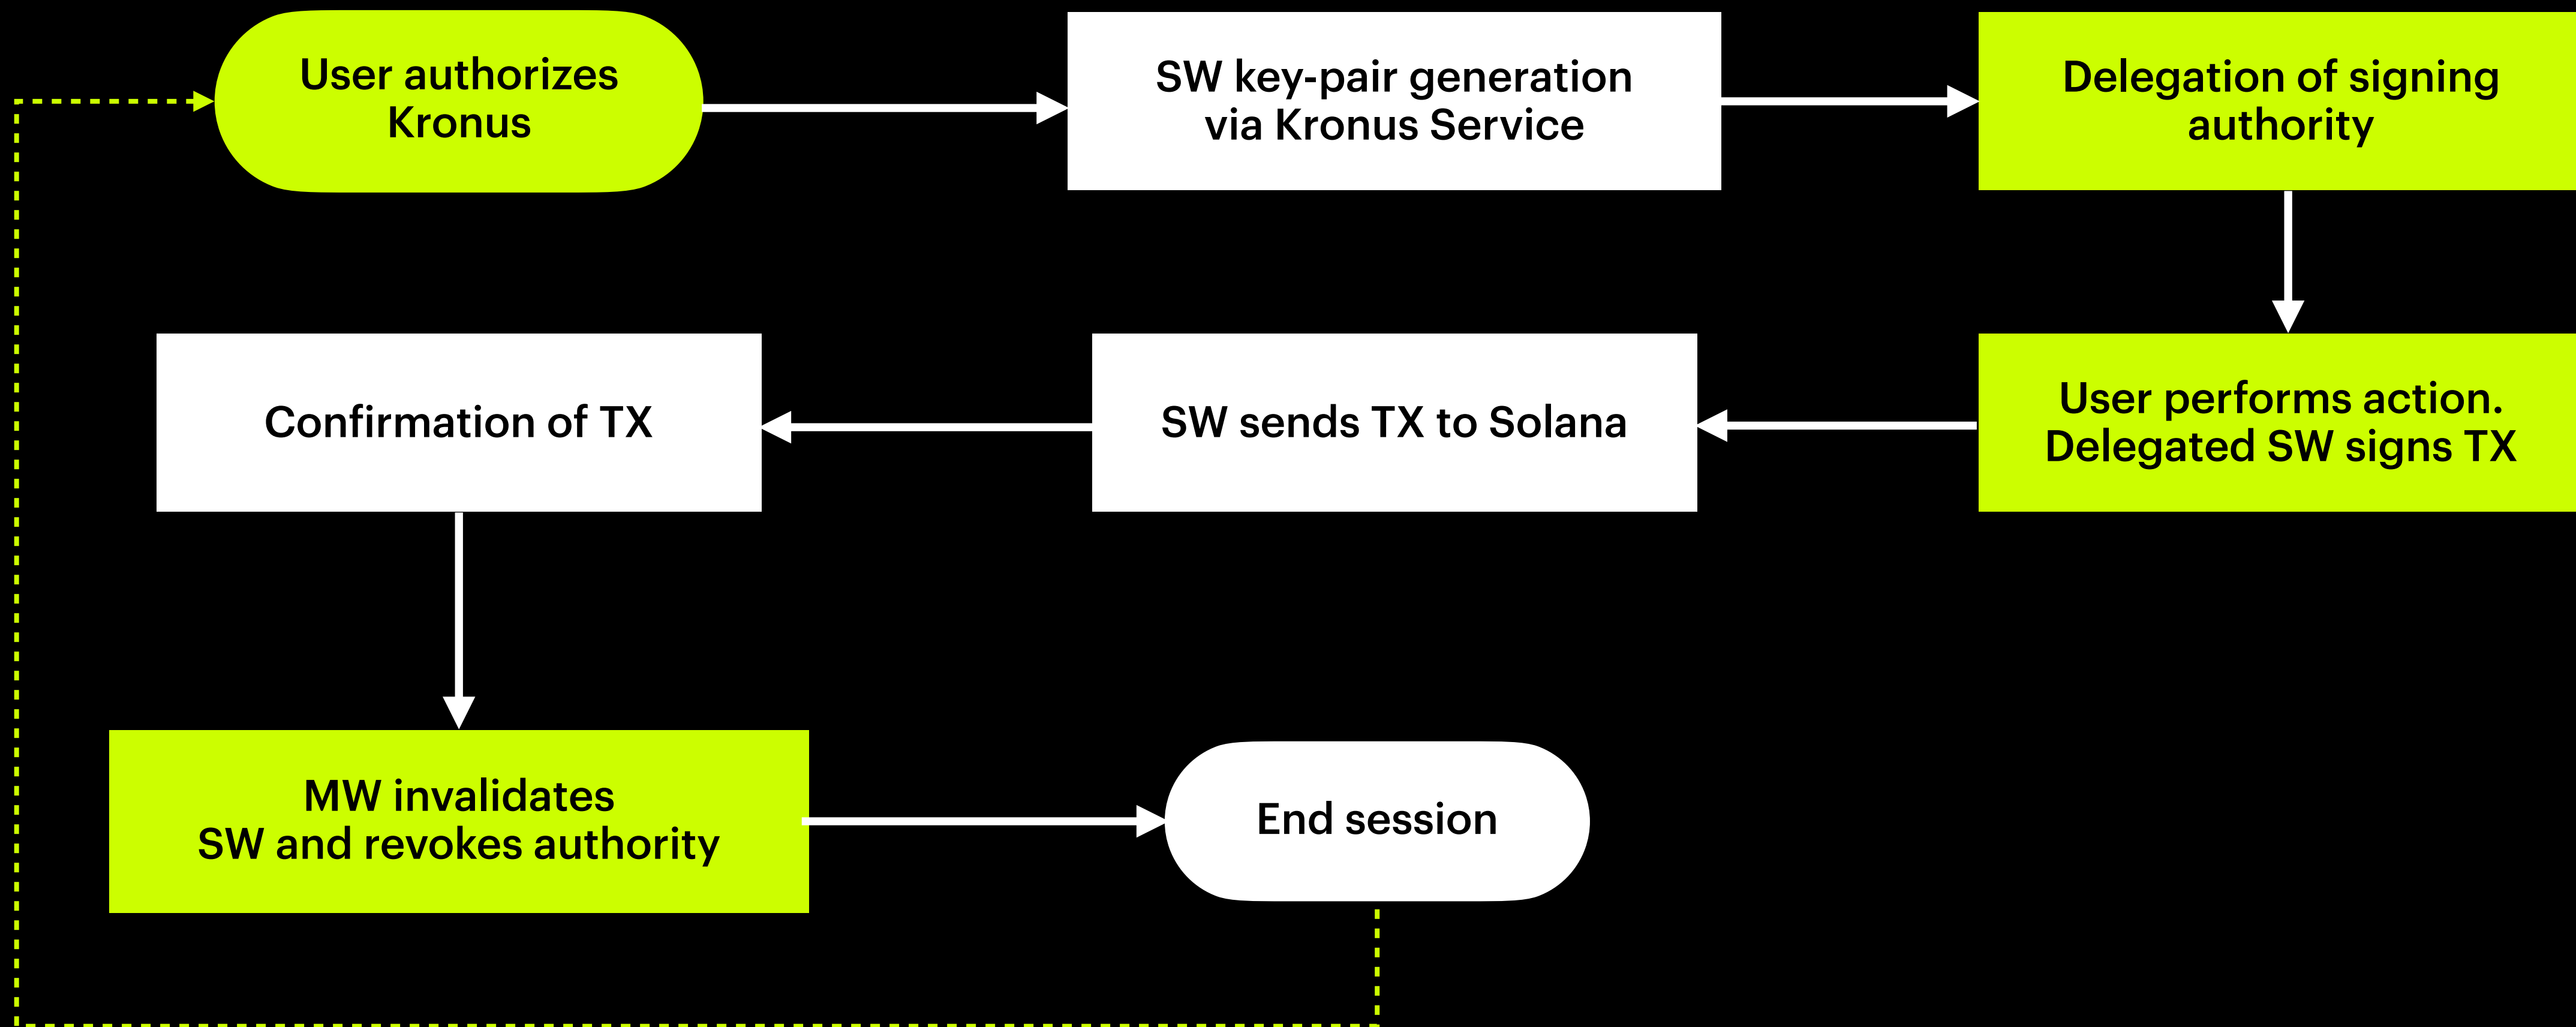

Demo : Tic-Tac-Toe Game **Logs**

Log streams from Solana show each players actions for player 1 and player 2

Kronus Protocol Flow

Bring Your Own Contract

Kronus Macros

Build Kronus seamlessly into your Smart contracts with our Library of Rust Macros

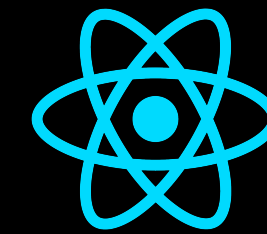

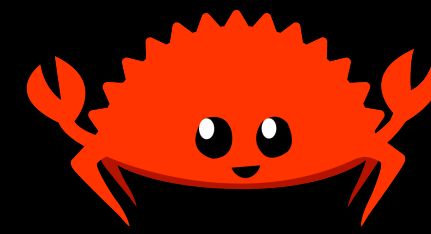

```
// 1. Import Kronus `Delegate`  
//      macro in your Anchor program  
  
use anchor_lang::prelude::*;  
use kronus_protocol::Delegate;  
  
// 2. Mark your accounts as a Delegate  
//      candidate account with the `Delegate`  
//      macro  
//  
// - It allows the `Create` instruction to  
//   to be signed by a delegate authority.  
#[derive(Accounts, Delegate)]  
pub struct Create<'info> {  
  
    #[account(init, payer = user, space = 16 + 16)]  
    pub base_account: Account<'info, BaseAccount>,  
  
    #[account(mut)]  
    pub user: Signer<'info>,  
  
    pub system_program: Program<'info, System>,  
}  
  
// An account that goes inside a transaction  
#[account]  
pub struct BaseAccount {  
    pub count: u64,  
}
```

Cross-platform Support

Helm

Kronus is able to function in fully
decentralized applications, and
Centralized applications

Kronus Use Cases

- Gaming dApps
- Decentralized Marketplaces
- DeFi

Business Model

Micro-TX commissions

Kronus charges a small micro-fee of 10% of the gas fee per transaction

Volume Based Pricing

First 10,000 TX Free per app
\$1000 per 100,000 MAU per month.
